DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1 and 2 are rejected under 35 U.S.C. 102(e) as being anticipated by Bae et al. (2004/0055011A1).

Regarding claim 1, Bae discloses a mobile telephone television apparatus showing a register map (note tables 1A-1E) for storing setting information for a TV mode and an OSD mode, which meets the memory as claimed, and a controller for reading out the setting information in response to a selected mode (note paragraph 0049).

Regarding claim 2, Bae shows that the setting information on the TV mode includes the contrast and brightness setting information.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 2622

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

4. Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Bae et al. (2004/0055011A1) in view of Ogoro (6,891,525).

Regarding claim 3, Bae does not disclose the setting information on the image in the telephone mode as claimed. Ogoro, from the similar field of endeavor, teaches a luminance level adjusting apparatus for controlling the luminance level according to a detected input mode, which effectively reduces the power consumption of the mobile phone. Ogoro also teaches that by turning off the backlight of the LCD after a certain period of time, more power could be saved (note background of the invention). The latter feature might be inherently included in Bae since he already uses a timer in the TV mode. Knowing that battery life is an important factor in Bae, it would have been obvious to one of ordinary skill in the art at the time that the invention was made to include the luminance level control features of the Ogoro into Bae so that the power consumption rate could be reduced while the battery life prolonged.

5. Claims 4-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bae et al. (2004/0055011A1) in view of Finke-Anlauff (5,479,476).

Regarding claims 4-6, Bae discloses all the features of the instant invention except the sound setting information as claimed; instead, the setting information applies to the video data only. Finke-Anlauff, from the similar field of endeavor, discloses a mobile telephone that changes sound volume in accordance with an environment. Having the sound volume adaptively adjusted, the user can clearly hear the audio signal

of the telephone under different kinds of environments. Hence, it would have been obvious to one of ordinary skill in the art at the time that the invention was made to include the adaptive sound volume adjustment feature of the Finke-Anlauff into Bae so that the audio signal reproduced could be heard by the user under different kinds of environments.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Hamamura et al. (7,346,376) shows a cell phone with brightness adjustment.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to M. Lee whose telephone number 571-272-7349. The examiner can normally be reached on Monday through Thursday from 9 to 6.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Sinh Tran, can be reached on 571-272-7564. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
